This can be proved in the same way as the formula given for A099267. There are some generalizations. For instance, it is possible to consider "a(n) + K * n" instead of "a(n) + n" for deleting terms where K=0,1,2,...is fixed. The constant involved in the Beatty sequence for the sequence of deleted terms then depends on K and equals (K + 1 + sqrt((K + 1) ^ 2 + 4)) / 2. K=0 is related to A099267. 1 + A001954 is the complement sequence of this sequence A136119. - _ Benoit Cloitre _ , Apr 18 2008 •
